- **Norovirus:** Days or **weeks!**
- **MRSA:** Days to **weeks!**

Hand Hygiene is the single most important measure for preventing the spread of infection!

Mick Janaway - Director

In August 2012 Mick contracted an infection in a small cut on his right thumb.

It travelled up his arm and infected his bloodstream with **Streptococcus A**

'I had four life-saving operations to save my arm and life – at one point I even stopped breathing on the operating table.'

As a result of his near-death experience when Mick discovered StepNpull® he was hooked!

'It was so simple and it could save lives here in the UK and Europe'

Revolutionising the door handle!

"The product is so simple it's genius" Trade show visitor

Simple to use!

Where can StepNpull® be used?

- Hospitals
- Healthcare
- Food Preparation
- Cruise Ships

Why do I need StepNpull® The Foot Handle?

- Eliminates 100% hand to handle germ transfer!
- Healthy employees save time and money!
- Effective to prevent the spread of infection!
- Saves on cost of paper towels:
- Saves on maintenance
- Saves on waste
- Saves on restocking
- Saves on cleaning costs
- Saves on environmental cost of paper production

Think about this!

One in four people have faecal matter (poo) on their hands

Think about this!

**It takes approximately 20 seconds to wash
your hands properly ...
The time it takes to sing Happy Birthday twice!**

Think about this!

The next time you visit a public toilet
you will be thinking about hand
hygiene!

Help Prevent The Spread of Infection – The Solution is here!
